DETAILED ACTION

Allowable Subject Matter

1. Claims 1-24 are allowed.
2. The following is an examiner's statement of reasons for allowance: the prior art searched and cited failed to teach or fairly suggest an apparatus for sampling and preparing gaseous matter with entrained particulate matter for analysis, the apparatus having conduit having an exit opening connected in communication with said particle entrance port of said momentum separator, the conduit having an entrance opening connected in communication with said exit opening and configured and disposed to receive particles to be analyzed, the conduit being configured to transport there through the particles from said entrance opening to said exit opening and wherein said conduit includes a restrictive flow portion having an effective flow diameter in the range of about 0.5 to 4.0 millimeters and disposed between said entrance opening and said entrance port of said momentum separator in combination with the rest of claims 1 and 4. Claims 2, 3, and 5 are allowable because of their dependencies upon claims 1 or 4.
3. The prior art searched and cited failed to teach or fairly suggest an apparatus for sampling and preparing gaseous matter with entrained particulate matter for

analysis, the apparatus having a momentum separator having a particle exit port configured for releasing a beam of particles and connected in communication with said particle input port of said glow discharge unit, said momentum separator having a particle entrance port connected in communication with said particle exit port in combination with the rest of claim 6. Claims 7-13 are allowable because of their dependencies upon claim 6.

4. The prior art searched and cited failed to teach or fairly suggest a method for sampling and preparing gaseous matter with entrained particulate matter for analysis, the method having a step of using a conduit to generate and transport a stream including particulate matter to the entrance port of a momentum separator wherein said conduit has an entrance opening and a restricted flow portion having an effective flow diameter in the range of about 0.5 to 4.0 millimeters and disposed between said entrance opening and said entrance port of said momentum separator; using said momentum separator to provide a beam containing particulate matter to be analyzed in combination with the rest of claim 14. Claims 15-24 are allowable because of their dependencies upon claim 14.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should

preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
